OSVP Clip documentation

Introduction

The OSVP Clip (clip) is a collection of metadata parameters sampled over a specified duration. Each parameter is either:

- static: the parameter has at constant value over the duration of the clip
- dynamic: the parameter is sampled at regular intervals over the duration of the clip

Each parameter is identified by a unique name. It also has a general description as well as a specific set of constraints.

Parameters

`active_sensor_physical_dimensions`

Description

Height and width, in microns, of the active area of the camera sensor

Sampling

Static

Constraints

The height and width shall be each be an integer in the range [0..2,147,483,647].

`active_sensor_pixel_dimensions`

Description

Height and width, in pixels, of the active area of the camera sensor

Sampling

Static

Constraints

The height and width shall be each be an integer in the range [0..2,147,483,647].

`duration`

Description

Duration of the clip in seconds

Sampling

Static

Constraints

The parameter shall be a rational number whose numerator and denominator are in the range (0..2,147,483,647].

`entrance_pupil_position`

Description

Entrance pupil of the lens in millimeters

Sampling

Regular

Constraints

The parameter shall be a rational number whose numerator and denominator are in the range (0..2,147,483,647].

`focal_length`

Description

Focal length of the lens in millimeter

Sampling

Regular

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

`focal_position`

Description

Focus distance/position of the lens millimeters

Sampling

Regular

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

`fps`

Description

Capture frame frate of the camera in frames per second (fps)

Sampling

Static

Constraints

The parameter shall be a rational number whose numerator and denominator are in the range (0..2,147,483,647].

`iso`

Description

Arithmetic ISO scale as defined in ISO 12232

Sampling

Static

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

`lens_serial_number`

Description

Unique identifier of the lens

Sampling

Static

Constraints

The parameter shall be a Unicode string betwee 0 and 1023 codepoints.

`t_number`

Description

Thousandths of the t-number of the lens

Sampling

Regular

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

`white_balance`

Description

White balance of the camera expressed in degrees kelvin.

Sampling

Static

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].
