

# OSVP Clip documentation

---

## Introduction

---

The OSVP Clip (clip) is a collection of metadata parameters sampled over a specified duration. Each parameter is either:

- static: the parameter has at constant value over the duration of the clip
- dynamic: the parameter is sampled at regular intervals over the duration of the clip

Each parameter is identified by a unique name. It also has a general description as well as a specific set of constraints.

## Parameters

---

### `active_sensor_physical_dimensions`

#### Description

Height and width of the active area of the camera sensor

#### Units

micron

#### Sampling

Static

#### Constraints

The height and width shall be each be an integer in the range [0..2,147,483,647].

### `active_sensor_pixel_dimensions`

#### Description

Height and width of the active area of the camera sensor

#### Units

pixel

#### Sampling

Static

## Constraints

The height and width shall be each be an integer in the range [0..2,147,483,647].

### anamorphic\_squeeze

## Description

Nominal ratio of height to width of the image of an axis-aligned square captured by the camera sensor. It can be used to de-squeeze images but is not however an exact number over the entire captured area due to a lens' intrinsic analog nature.

## Units

0.01 unit

## Sampling

Static

## Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

### capture\_fps

## Description

Capture frame frate of the camera

## Units

hertz

## Sampling

Static

## Constraints

The parameter shall be a rational number whose numerator and denominator are in the range (0..2,147,483,647].

### duration

## Description

Duration of the clip

## Units

second

## Sampling

Static

## Constraints

The parameter shall be a rational number whose numerator and denominator are in the range (0..2,147,483,647].

### entrance\_pupil\_position

## Description

Entrance pupil diameter of the lens

## Units

millimeter

## Sampling

Regular

## Constraints

The parameter shall be a rational number whose numerator and denominator are in the range (0..2,147,483,647].

### focal\_length

## Description

Focal length of the lens

## Units

millimeter

## Sampling

Regular

## Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

### focal\_position

## Description

Focus distance/position of the lens

## Units

millimeter

## Sampling

Regular

## Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

### iso

## Description

Arithmetic ISO scale as defined in ISO 12232

## Units

unit

## Sampling

Static

## Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

### lens\_serial\_number

## Description

Unique identifier of the lens

## Units

n/a

## Sampling

Static

## Constraints

The parameter shall be a Unicode string between 0 and 1023 codepoints.

### t\_number

## Description

The linear t-number of the lens

## Units

0.001 unit

## Sampling

Regular

## Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

### white\_balance

## Description

White balance of the camera.

## Units

kelvin

## Sampling

Static

## Constraints

The parameter shall be a integer in the range (0..2,147,483,647].
