OSVP Clip documentation

Introduction

The OSVP Clip (clip) is a collection of metadata parameters sampled over a specified duration. Each parameter is either:

- static: the parameter has at constant value over the duration of the clip
- dynamic: the parameter is sampled at regular intervals over the duration of the clip

Each parameter is identified by a unique name. It also has a general description as well as a specific set of constraints.

Parameters

active_sensor_physical_dimensions

Description

Height and width of the active area of the camera sensor

Units

micron

Sampling

Static

Constraints

The height and width shall be each be an integer in the range [0..2,147,483,647].

anamorphic_squeeze

Description

Nominal ratio of height to width of the image of an axis-aligned square captured by the camera sensor. It can be used to de-squeeze images but is not however an exact number over the entire captured area due to a lens' intrinsic analog nature.

Units

0.01 unit

Sampling

Constraints
The parameter shall be a integer in the range (02,147,483,647].
capture_fps
Description
Capture frame frate of the camera
Units
hertz
Sampling
Static
Constraints
The parameter shall be a rational number whose numerator and denominator are in the range (02,147,483,647].
duration
Description
Duration of the clip
Units
second
Sampling
Static
Constraints
The parameter shall be a rational number whose numerator and denominator are in the range (02,147,483,647].
<pre>entrance_pupil_position</pre>
Description
Entrance pupil diameter of the lens
Units

Static

millimeter
Sampling
Regular
Constraints
The parameter shall be a rational number whose numerator and denominator are in the range (02,147,483,647].
fdl_link
Description
Unique identifier of the FDL used by the camera.
Units
n/a
Sampling
Static
Constraints
The parameter shall be a UUID URN as specified in IETF RFC 4122. Onlyu lowercase characters shall be used. Example: urn:uuid:f81d4fae-7dec-11d0-a765-00a0c91e6bf6
focal_length
Description
Focal length of the lens
Units
millimeter
Sampling
Regular
Constraints
The parameter shall be a integer in the range (02,147,483,647].
focal_position
Description

Units
millimeter
Sampling
Regular
Constraints
The parameter shall be a integer in the range (02,147,483,647].
iso
Description
Arithmetic ISO scale as defined in ISO 12232
Units
unit
Sampling
Static
Constraints
The parameter shall be a integer in the range (02,147,483,647].
lens_serial_number
Description
Unique identifier of the lens
Units
n/a
Sampling
Static
Constraints
The parameter shall be a Unicode string betwee 0 and 1023 codepoints.
shutter angle

Focus distance/position of the lens

Description Shutter speed as a fraction of the capture frame rate. The shutter speed (in units of 1/s) is equal to the value of the parameter divided by 360 times the capture frame rate. Units degrees (angular) Sampling

Constraints

Static

The parameter shall be an integer in the range (0..360000].

t_number

Description

The linear t-number of the lens

Units

0.001 unit

Sampling

Regular

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].

white_balance

Description

White balance of the camera.

Units

kelvin

Sampling

Static

Constraints

The parameter shall be a integer in the range (0..2,147,483,647].
